

#### Use of the Internet across the world

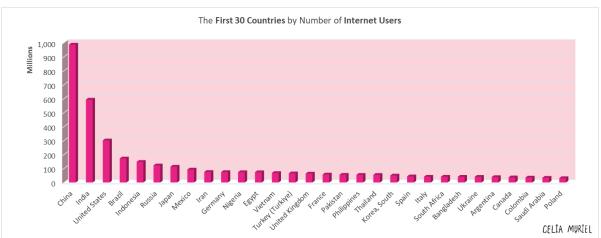

Details of the use of the Internet across the world, which I discussed in the blog post What you do online is nobody's business.

#### **Internet Users**

The number of internet users comes from a <u>country comparison of Internet users</u> in the CIA The World Factbook (accessed on October 19<sup>th</sup>, 2022). These numbers are a very rough estimate. As the site explains:

"Internet users" compares the number of users within a country that access the Internet. Statistics vary from country to country and may include users who access the Internet at least several times a week to those who access it only once within several months.

China         987,000,000         2020 est.           India         593,400,000         2020 est.           United States         301,665,983         2020 est.           Brazil         172,173,121         2020 est.           Indonesia         147,702,755         2020 est.           Russia         122,488,468         2020 est. Palestine	4.89

#### Accurate information

Many countries and regions provide more accurate, regular and detailed analyses of their digitalisation status, such as the <u>European Union</u>, as part of their ongoing efforts to enhance their infrastructure and legislate as per the citizens' Internet use and needs. Unfortunately, I could only find this information to compare countries worldwide at the time of writing this document.
